

## Generate PM Work Orders – Nesting Overview

The PM Generator utilizes information from the PM Template and the Asset Profile (*Asset Management Module*) to create PM work orders. Determine the desired setting (*Yes or No*) for the Nested PM. Upon creation of a new PM Generator record, the Nested PM defaults to *No*.

**Nested PM** offers two options to choose from:

1. **No** – The work order generation process will create a separate work order for each frequency. Example: If an annual and monthly PM are due on an Asset, AiM will generate two work orders.
2. **Yes** – AiM will create PM work orders for the least frequent PM only.

**- IMPORTANT -** With this option, augment the PM standard with the lowest frequency to include all activities/checkpoints. For example, the Quarterly PM standard will not be generated, therefore the Semi-Annual PM standard shall include all activities/checkpoints from the Quarterly PM standard.

MONTH	PM FREQUENCY		
January			
February			
March	Quarterly		
April			
May			
June	Quarterly	Semi-Annual	
July			
August			
September	Quarterly		
October			
November			
December	Quarterly	Semi-Annual	Annual
